

PILOT PROJECTS

The Monroe County Board of Education encourages the supervisor of instruction to carry out pilot projects in all areas related to instruction when he feels strongly that an area need improvement and the pilot project holds promise for greater opportunities for pupils. Some of the areas in which such projects could be carried out are methods of instruction, grouping of pupils, materials and equipment, issuing grade cards, organization of instructional programs, class size, and use of paraprofessionals'.

All projects are carefully supervised and evaluated by the supervisory staff. Those projects proving successful are woven into the regular instructional program as rapidly as resources and finances permit.
